PROFESSIONAL SUMMARY

Results-driven IT Operations and Cloud Infrastructure Specialist with 13+ years of progressive experience in AWS cloud operations, enterprise systems administration, application support, and IT service management. Proven track record of designing automation solutions that deliver measurable cost savings including a key AWS project achieving 99.8% database runtime reduction and 40% monthly cost savings.

Skilled in Incident Management, Problem Management, Change Management, and SLA-driven service delivery, underpinned by strong ITIL/ITSM principles. Hands-on expertise across AWS EC2, RDS, S3, IAM, Lambda, CloudWatch, and EventBridge, combined with deep experience supporting and troubleshooting enterprise platforms including Salesforce, Amazon Connect, NICOR, MDA, and Remedy ITSM.

Adept at bridging the gap between technical operations and business stakeholders, with a strong ability to translate complex technical challenges into practical, cost-effective solutions. Currently pursuing a BSc Honours in Computing (UNISA, expected 2027).

Core Keywords: AWS SysOps | Cloud Operations | EC2 | RDS | Lambda | CloudWatch | EventBridge | IAM | S3 | ITSM | ITIL | Incident Management | SLA Management | Root Cause Analysis | Salesforce | Amazon Connect | NICOR | MDA | Remedy | Jira | SQL | Application Support | Systems Administration | Cost Optimisation | Automation

PROFESSIONAL EXPERIENCE

AWS SysOps Engineer

Valenture Institute | January 2025 – Present

Valenture Institute is an ed-tech company delivering accredited online education, including the UCT Online High School. As AWS SysOps Engineer, I own the operational health of the cloud infrastructure supporting thousands of students and educators.

Responsibilities:

- Manage and optimise multi-environment AWS cloud infrastructure ensuring high availability, performance, and security for mission-critical educational platforms
- Administer and support core AWS services including EC2, RDS, S3, IAM, Lambda, CloudWatch, and EventBridge
- Design and implement automation solutions using AWS Lambda and EventBridge, reducing manual operational overhead and improving system reliability
- Build and maintain monitoring and alerting frameworks using CloudWatch to proactively detect, investigate, and resolve incidents before they impact users
- Support cloud backup strategies, disaster recovery planning, and business continuity initiatives
- Act as escalation point for complex infrastructure and cloud incidents, providing expert-level troubleshooting and resolution
- Collaborate with engineering and product teams to support scalable, resilient application architectures
- Drive cloud cost optimisation initiatives including automated scheduling of non-production AWS resources

- Govern SaaS service reviews, compliance audits, and vendor assessments
- Maintain technical documentation, operational runbooks, and standard operating procedures (SOPs)
- Plan, coordinate, and execute infrastructure patching, upgrades, and change management activities

Key Achievements:

- Delivered 99.8% reduction in RDS runtime for non-production environments through Lambda and EventBridge automation while reducing monthly runtime from 744 hours to approximately 1.33 hours
- Designed weekday-only RDS scheduling automation for Dev and QA environments, achieving 70% runtime reduction and approximately 40% monthly cost savings
- Improved security posture by restricting database availability to defined maintenance windows, significantly limiting exposure

FUSE System Administrator (Facilitate. Unify. Support. Enable.)

TransUnion | June 2022 – January 2025

TransUnion is a global credit information and risk management company operating in 30+ countries. As part of the FUSE team, I provided enterprise systems administration and Tier 1–3 application support for global voice operations spanning the USA, Costa Rica, India, South Africa, Philippines, and Colombia.

Responsibilities:

- Administered enterprise systems including AWS EC2, Amazon Connect (cloud contact centre), Salesforce CRM, Buster, and CRS+
- Managed end-to-end user onboarding including account provisioning, system access, permissions, and database privilege assignments across multiple platforms
- Performed Tier 1–3 troubleshooting for infrastructure, applications, connectivity, and access control issues across global multi-region environments
- Managed incidents and service requests following formal ITSM escalation procedures, ensuring adherence to SLA targets
- Investigated complex system and software issues, coordinating with internal engineering teams and external vendors for timely resolution
- Monitored operational systems in real time and performed root-cause analysis (RCA) for recurring issues, implementing preventative measures
- Communicated incident status, outage notifications, and resolution updates to internal stakeholders and senior management
- Contributed to operational metrics reporting and service improvement planning

Key Achievement:

- Developed a self-service ITSM web portal integrated with Remedy ITSM, standardising incident and request submissions and reducing support team workload through automated ticket creation and embedded self-service FAQs

IT Business Analyst

Excellerate Property Services | May 2012 – May 2022

Excellerate Property Services is a large multi-branch property management company. Over a 10-year tenure, I progressed from application support into a hybrid IT Business Analyst role, supporting enterprise systems and driving process improvements across the organisation.

Responsibilities:

- Provided first, second, and third-line application support and troubleshooting for NICOR, SAP and MDA enterprise systems
- Managed user onboarding, offboarding, and access administration across SAP and SAP Business One (SAP B1), NICOR, and MDA
- Analysed business requirements, translated them into technical specifications, and coordinated with vendors and internal teams for delivery

- Conducted system testing, user acceptance testing (UAT), regression testing, and solution validation ahead of go-live deployments
- Developed SQL-based management reports to support data-driven decision-making
- Managed incidents and service requests in alignment with SLA targets and formal escalation procedures
- Supported disaster recovery processes including documentation, testing, and post-incident reviews
- Delivered end-user training, created user guides, and maintained system documentation
- Managed vendor relationships and coordinated with external providers for system enhancements and issue resolution

Key Achievements:

- Led end-to-end enterprise document migration to a new intranet document management platform, recreated folder structures, enforced access controls, and ensured minimal business disruption
- Supported the implementation of an automated tenant statement email distribution system: collected and validated tenant data in NICOR, coordinated SMTP configuration, and performed portal testing, improving communication efficiency and eliminating manual processes

Support Account Manager

MRI Software / PropSys | June 2015 – September 2015

Provided application support and technical assistance for property management platforms including NICOR and PropSys.

- Investigated and diagnosed client-reported issues, logging detailed bug tickets for development team review
- Provided system troubleshooting, configuration guidance, and user support to property management clients
- Tested new system enhancements prior to release to validate quality and functionality
- Designed operational and management reports to support business decision-making

CORE COMPETENCIES

Cloud & Infrastructure: AWS EC2, RDS, S3, IAM, Lambda, CloudWatch, EventBridge | Cloud Monitoring & Alerting | Infrastructure Automation | Cloud Cost Optimisation | System Patching & Upgrades | Business Continuity | Disaster Recovery Planning

IT Operations & Service Management: Incident Management | Problem Management | Change Management | SLA Management | Root Cause Analysis (RCA) | Escalation Management | Tier 1–3 Application Support | ITIL / ITSM Practices | Production Support | Vendor Management

Tools & Platforms: Jira | Remedy ITSM (BMC) | ClickUp | Salesforce | Amazon Connect | NICOR | MDA | SAP (User Access & Onboarding) | Slack | SQL

Professional Skills: Stakeholder Engagement | Technical Documentation | Cross-Functional Collaboration | Business Requirements Analysis | User Acceptance Testing (UAT) | User Training & Enablement | SQL Reporting

KEY PROJECTS

AWS RDS Automation & Cost Optimisation | Valentre Institute

- Designed and implemented a fully automated scheduling solution for non-production Amazon RDS environments using AWS Lambda and EventBridge
- Reduced monthly database runtime from 744 hours to approximately 1.33 hours, a 99.8% runtime reduction
- Eliminated all manual database start/stop processes through event-driven automation
- Improved security posture by restricting database availability to defined maintenance windows only

Amazon RDS Weekday Scheduling Automation | Valenture Institute

- Engineered weekday-only scheduling automation for PortInt Dev and QA environments
- Reduced monthly runtime from 744 hours to approximately 220 hours (70% reduction)
- Delivered approximately 40% monthly cost savings on targeted database environments

Self-Service ITSM Portal | TransUnion

- Developed a web portal integrated with Remedy ITSM to automate incident and service request ticket creation
- Standardised submission processes across global support teams and improved ticket quality
- Reduced support team workload through embedded self-service documentation and FAQs

SAP Document Migration | Excellerate Property Services

- Led end-to-end migration of enterprise documents to a new intranet document management platform
- Recreated folder structures and enforced department-specific access controls with minimal business disruption

Tenant Statements Email Distribution System | Excellerate Property Services

- Supported implementation of an automated tenant statement email distribution solution
- Collected, validated, and loaded tenant email data into NICOR; coordinated SMTP setup with the service provider
- Performed end-to-end portal testing, improved communication efficiency and eliminated manual distribution processes

EDUCATION

BSc Honours in Computing (In Progress — Expected 2027)

University of South Africa (UNISA)

Advanced Diploma in Information Resource Management | 2021

University of South Africa (UNISA)

National Diploma – Computer Systems Engineering | 2014

University of Johannesburg (UJ)

CERTIFICATIONS

AWS Certified Cloud Practitioner | Amazon Web Services | 2024
